[Download Source](#)

Installation

To install:

Direct CodeSandbox Links with Examples and Use Cases

- [Basic Row Layout](#)
- [Basic Column Layout](#)
- [With Lightbox](#)
- [Custom Dynamic Columns](#)
- [Selection using custom ImageComponent](#)
- [Sortable with drag and drop](#)

To build some examples locally, run:

```
yarn install
yarn start
```\
```

Then open [localhost:8000](http://localhost:8000) in a browser.

```
Use
```

```
```jsx
```

```
import Gallery from 'react-photo-gallery';
```

```
export default class Sample extends React.Component {
```

```
        <Gallery photos={PHOTO_SET} />
      );
    }
  }
  const PHOTO_SET = [
    {
      src: 'http://example.com/example/img1.jpg',
      width: 4,
      height: 3
    },
    {
      src: 'http://example.com/example/img2.jpg',
      width: 1,
      height: 1
    }
  ];
```

Gallery properties

PROPERTY	TYPE	DEFAULT	DESCRIPTION
photos	array	undefined	required; array of objects
columns	number	undefined	optional; number of photos per row; defaults to Gallery's breakpoint choosing

React.js Examples

onClick	function	undefined	optional; do something when the user clicks a photo; receives arguments event and an object containing the index, photo obj originally sent and the next and previous photos in the gallery if they exist
margin	number	2	optional; number of margin pixels around each entire image
direction	string	'row'	optional; column or row based layout
ImageComponent	function	default component	optional; use a different image component than the default provided to display your photo

Photos array item properties (passed into Gallery's photos property)

PROPERTY	TYPE	DEFAULT	DESCRIPTION
src	string	undefined	required; the img src attribute value of the image
srcSet	array or string	undefined	optional; srcSet attribute of the image
sizes	array or string	undefined	optional; sizes attribute of the image
width	number	undefined	required; original width of the gallery image (only used for calculating aspect ratio)

height	number	undefined	required; original height of the gallery image (only used for calculating aspect ratio)
alt	string	undefined	optional; alt text of the gallery image
key	string	src	optional; key to be used on component

ImageComponent props

If you're passing a function component to ImageComponent you will receive back these props:

PROPERTY	TYPE	VALUE
margin	string	optional; margin prop optionally passed into Gallery by user
index	number	required; the index of the photo within the Gallery
photo	object	required; the individual object passed into Gallery's <code>photos</code> array prop, with all the same props except recalculated height and width
direction	string	optional; direction passed into Gallery
top	number	required if direction is 'column'; top position of this image, only passed if direction prop was 'column'
left	number	required if direction is 'column'; left position of this image, only passed if direction prop was 'column'
onClick	function	optional; the onClick function optionally passed into Gallery by user
